

## ENVIRONMENTAL POLICY

Calibre Engineering is responsible for achieving good environmental practice and operating in a sustainable manner.

We are committed to reducing our environmental impact and continually improving our environmental performance as an integral part of our business strategy and operating methods.

It is our priority to encourage our clients and suppliers to do the same. Not only is this sound commercial sense but it ensures we deliver on our duty of care towards future generations.

### Our policy is to:

- Wholly comply with or exceed current environmental legislation, codes of practice and consent requirements.
- Prevent the production and dispersal of pollutants and promote resource conservation and closed cycles.
- Minimise our waste and then reuse or recycle as much of it as possible.
- Minimise energy and water usage in our buildings, vehicles and processes in order to minimise our consumption of natural resources, especially where they are non-renewable.
- Operate and maintain company vehicles with due regard to environmental issues as far as reasonably practical and encourage the use of alternative means of transport and car sharing.
- As far as possible purchase materials and services that do the least damage to the environment and encourage others to do the same.
- Assess the environmental impact of any new processes or products we intend to introduce in advance.
- Apply the principles of continuous improvement in respect of air, water, noise and light pollution from our premises and reduce any impacts from our operations on the environment and local community.
- Actively contribute to the development of employee awareness of environmental issues ensuring that they understand and implement our environmental policy.
- Address complaints about any breach of our Environmental Policy promptly and to the satisfaction of all concerned.
- Work in a structured and systematic manner that leads to continuous improvement in environmental performance.
